

# e-Learning Resource on

## Air Quality, WASH (Water Sanitation and Hygiene) and Urban Ecology

Citizen Science programmes combine volunteering at a field research project along with bespoke facilitated sessions designed to increase understanding of environmental issues. These programmes help transform people by enabling them to step out of their normal surroundings onto an experiential learning opportunity on the research project. Such programmes impact participants’ hearts and minds – inspiring passion and commitment and turning ideas into plans for action when they return to work or home.
